

Please amend the application as follows:

In the Claims

*Please amend Claims 1, 21, 25, 30, and 35 as follows. Amendments to the claims are indicated in the attached "Marked Up Version of Amendments" (pages i - iii).*

1.

(Thrice Amended) A docking system for a telephone comprising:

a hand held housing having a plurality of control elements and a connection port that electrically connects a control circuit within the housing to a wireless telephone that docks with the housing;

an active matrix liquid crystal display mounted to the housing, the display receiving display data from the circuit; and

a light source within the hand held housing that illuminates the display.

21.

(Twice Amended) A docking system for a telephone comprising:

a hand held housing having a plurality of control elements and a connection port that links a control circuit within the housing to a telephone attachable to the housing;

an active matrix liquid crystal display mounted to the housing and connected to the control circuit, the display receiving display data from the circuit;

a light source within the hand held housing that illuminates the display; and

a battery in the housing that provides power to the display and the light source.

25.

(Twice Amended) A docking system as in claim 21 further comprising a display subhousing, the display subhousing carrying the active matrix liquid crystal display, the light source, and a lens, wherein the display subhousing can be moved from a storage position to an operating position.

30.

(Twice Amended) A method of displaying an image on a docking system in conjunction with a wireless telephone, comprising:

linking an external port of the telephone with a connection port of a docking station of the docking system to dock the telephone with the docking station and to

provide a communication link between the telephone and the docking station, the telephone having a transceiver capable of receiving audio and image data; and operating a display control circuit of the docking station, the control circuit being connected to the transceiver and an active matrix liquid display of the docking station through the communication link, the operating generating an image on the display.

35. (Twice Amended) A docking system for a telephone comprising:

a hand held housing having a plurality of control elements and a connection port that links a color sequential display control circuit within the housing to a telephone attachable to the housing;

an active matrix liquid crystal display mounted to the housing and connected to the control circuit, the display receiving display data from the circuit;

a light emitting diode within the hand held housing that illuminates the display;

and

a battery in the housing that provides power to the display and the light emitting diode.

Please add new Claims 41-44.

41. (New) The system of claim 1, wherein the active matrix liquid crystal display includes an array of at least 75,000 pixel electrodes having a display area of less than 158 mm<sup>2</sup>.

42. (New) A docking system for a telephone as in claim 21, wherein the active matrix liquid crystal display has an array of at least 75,000 pixel electrodes and a display area of less than 158 mm<sup>2</sup>.

43. (New) A method of displaying an image on a docking system as in claim 30, wherein the active matrix liquid crystal display includes an array of at least 75,000 pixel electrodes having a display area of less than 158 mm<sup>2</sup>.
